Overview

Prevent inconsistent feature flag values during a single request

Adding session state to the ASP.NET Core app

Maintain feature flag values across multiple requests in a session

Summary

Prevented inconsistent feature flag values during a single request

– IFeatureManagerSnapshot

Added session state to the ASP.NET Core app

– services.AddDistributedMemoryCache();

– app.UseSession();

Maintained feature flag values across multiple requests in a session

– [PreserveFeatureAcrossRequests]

– ISessionManager

– services.AddTransient<ISessionManager, HttpContextFeatureSessionManager>();
